

Please leave satellite radio alone! Services such as XM Radio offer a much better variety of programs and channels than standard radio, which is monopolized by corporate giant Clear Channel. I don't want to hear the same 9 songs over and over on every channel I turn to on the regular radio... that is why I no longer listen to the regular radio. Satellite radio should be free to offer local weather and traffic reports as well - Clear Channel and other regular radio stations don't control the weather and the highways (yet, anyway). Please reject the NAB's petition 04-160. Thank you.
